

### **Activity idea 24: Global inequality (two sessions of 30 minutes)**

In this activity students will explore global inequality by linking key terms that play a role in global inequality.

Start by having students find the definitions of some of the key terms associated with global inequality.

Ask them to work in pairs and fill in the table on **worksheet 20**.

Check students' answers to make sure they are correct before playing the game. Then have students cut out the cards and play a game of memory by matching the key terms to the correct definition.
